Prevedi

The LongshotHD app allows you to view and interact with any Targetvision or Longshot camera system and was designed to replace the older Targetvision app which is no longer being supported. To be able to see a video feed in this app, you must have a Targetvision or Longshot camera system. The app allows user to view live video of their target and interact with it like never before. Users can pinch to zoom and swipe to pan on the video feed to get a closer look at their target and if their bullet holes are hard to find, they can use the Blinker Shot Locator feature to make their last shot or last
